fasteners & tagging guns

Sterling

Fasteners & tagging guns

Sterling® is a brand meant for those, who seek effective solutions to improve logistics within the production process, co-packing, labelling and product identification.

The label attached to the product plays a very important and multifunctional role. It serves as an information carrier, improves logistics, makes the sale easier and promotes the brand. That is why, in the relation between trade and consumer is important not only the content and appearance of the label, but the method of attachment as well.
The element that attaches the label with the product is the perfectly made Sterling® fastener, which we offer in various shapes, colours and sizes. For the highly-efficient method of attaching our Sterling® fasteners we offer compatible Sterling® tagging guns of the very strong built and high functionality.

Designing and developing new technology we aimed at high quality, precision of operation and long-lasting reliability of our products. Thanks to that, we manage to provide effective solutions for our customers in various sectors of industry including clothing, textile, hosiery, footwear, leather, fur farming and automotive.

We are proud of the quality and functionality of our products that have been developed on the basis of profound research on needs and expectations of our customers and partners.

We offer you this broshure to serve you as a guide through the range of our products.

STANDARD Series

Fasteners

Sterling® STANDARD Series fasteners are the primary and the most commonly applied group of fasteners used in many industries.

STANDARD Series fasteners are applied for tagging, ticketing, packing and attaching products or semi-products to each other. They can also serve as markers for product identification.

Manufactured from polypropylene or nylon STANDARD Series fasteners have smooth profile and exceptional flexibility. Polypropylene fasteners are transparent and more flexibile while nylon fasteners are characterized by improved strength and have natural, raw white colour. Along with standard colours, fasteners are available in any colour from the RAL catalogue.

For utility reasons, STANDARD Series fasteners are available in three types depending on the shape of the head:

Blade™
RingHook™
FullRing™

STANDARD Series fasteners can be attached with the use of a manual tagging gun or an automated pneumatic device.

STANDARD Series

Tagging guns

Sterling® STANDARD tagging guns are used for attaching any type of STANDARD Series fasteners manualy. They are characterised by thier unique built and functionality.

Sterling® STANDARD tagging guns are available in three types, differing from one another by the mechanism adapted for different sizes of needles.

SGL-1

SGR-1

SGS-1

ATTENTION !
Sterling® STANDARD tagging guns should operate only with STANDARD Series fasteners. Sterling® STANDARD tagging guns are always distinguished by the **GREEN** colour.

Sterling

Durability

Built of very hard polymer providing long-lasting operation. Shockproof from height up to 1,5m. Special feature of the needle – the shaft made of steel and the special shank protecting the neddle from the damage during a fall from height.

Functionality

Operates with every type and sort of STANDARD SERIES fasteners. Loading the fasteners is very quick and easy. Done in one step.

Repeatability

Equipped with reliable mechanism which reloads the clip smoothly until the last fastener in the clip is used.

Ergonomics

The adequate shape of a handle provides that Sterling® STANDARD tagging gun is easy to use and operating the gun does not cause any pain of the operator's hand.

Comfort of use

Adequately chosen spring makes releasing the trigger very smooth.

FINE Series
Fasteners

Sterling® FINE Series fasteners are recommended for thin and delicate materials as well as for woven fabrics with a dense weave. The special shape of FINE Series fasteners eliminates the risk of causing damage to the product and enables breaking off the fastener safely without use of any additional tools.

FINE Series fasteners are used for tagging, ticketing and packing products in clothing, textile and hosiery industry.

Manufactured from polypropylene or nylon FINE Series fasteners have smooth profile and exceptional flexibility. Polypropylene fasteners are transparent and more flexibile while nylon fasteners are characterized by improved strength and have natural, raw white colour. Along with standard colours, fasteners are available in any colour from the RAL catalogue.

For utility and aestethic reasons, FINE Series fasteners are available in two types:

Blade ™
T-line ™

FINE Series fasteners can be attached by the manual tagging gun or the automated pneumatic device.

EHD Series

Fasteners

T-Line™ EHD fasteners are distinguished by their exceptionally high durability and toughness. T-Line™ EHD fasteners are applied in footwear industry, automotive industry, leather industry, fur farming and simply everywhere, where a very strong fastener is needed.

T-Line™ EHD fasteners are made of nylon and the head of the fastener has a special profile in the shape resembling the letter T.

T-Line™ EHD fasteners are available either in standard, natural, raw white colour or can be customized with any colour from the RAL catalogue.

T-Line™ EHD fasteners can be attached with the use of the manual tagging gun or the automated pneumatic device.

EHD Series
Tagging guns

Sterling® EHD tagging gun is used to attach EHD series fasteners manually. Distinguished by a very solid build and practicality Sterling® EHD tagging gun is capable of operation with two types of needles: ***Shoe Needle™*** and ***Sharp Needle™***. The first one is applied mainly in footwear and leather industry. The second one is applied in various sectors of industry.

ATTENTION!
Sterling® EHD tagging gun should operate only with EHD Series fasteners.

Sterling

Sterling® EHD tagging gun special features:

Durability

Built of very hard polymer providing long-lasting operation. The shaft of needle made of steel. Shockproof from height up to 1,5m.

Ergonomics

The adequate shape of the handle provides that Sterling® tagging gun is easy to use and its weight does not cause any discomfort of the operator's hand.

Repeatability

Equipped with reliable mechanism, which reloads the clip smoothly until the last fastener in the clip is used.

Comfort of use

Adequately chosen spring makes releasing the trigger very smooth. The special clip positioning mechanism makes loading the fasteners very easy. Sterling® EHD tagging gun fits perfectly in the hand.

LOOP Series
Fasteners

LoopSeries™ fasteners create a loop connecting the product with the label. LoopSeries™ fasteners are used for tagging and connecting products, which dimension or shape requires application of a loop.

LoopSeries™ fasteners are used for aesthetic purposes in order to distinguish a product or a brand. LoopSeries™ fasteners are made of plastics and natural materials.

Installation of the LoopSeries™ fastener is done by locking up the two ends of the fastener in the specific place. This operation, depending on the type of a LoopSeries ™ fastener, can be done manually or by the use of tagging guns.

Fasteners intended for manual installation:

LoopSeal Pyramide ™ - the head in the shape of the cone.

LoopSeal Barrel ™ - the head in the shape of the cylinder, or literally a barrel.

BeadSecure ™ - with the adjustable beading loop.

Fasteners intended for installation by the use of tagging guns:

V-Loop ™ - made of polypropylene and installed by the V-TOOL tagging gun.

CordSeal ™ - made of polyester cord, perfect for unique distinction of your product and installed by the use of AMOS tagging gun.
